

Questions for LEAP Customization

Adrian S. Wisnicki, 11 April 2014

- 1) Can there be more than one <principal>?
- 2) How do we handle standard indenting of paragraphs?
- 3) Currently our <pb> has an @n, but I think we should also provide @facs as each transcribed page will almost always correspond to an image. The @facs value will be the same as @n plus .xml How do we handle this?
- 4) We need copyright information in header. Here's the format we currently have for the spectral imaging transcriptions:

<availability>

<p>All materials are licensed for use under the <ref target="https://creativecommons.org/licenses/by-nc/3.0/">Creative Commons Attribution-Noncommercial 3.0 Unported License</ref>. (c) Dr. Neil Imray Livingstone Wilson, 2011</p>

</availability>

Should we just use that?

- 5) Livingstone has a diary where there is a blank column in the left margin, into which he periodically inserts a new date to mark a new entry. Otherwise that column is blank. How do we mark that?
- 6) We use <term type="people"> for people (plural) of a given nationality (Englishmen). How do we mark a single individual (Englishman)? Also, should we use <term type="people"> or, simply, <nationality>?
- 7) What's the difference between using <q> and " ?
- 8) What is the difference between using <figure> and <graphic>?
- 9) What is the difference between <geo> and <location>?
